SUMMARY

Data-focused engineering student with strong fundamentals in Data Structures and backend development, experienced in building REST APIs and working with structured data using Python and SQL. Hands-on experience in processing large datasets (100K+ records) and developing scalable backend systems. Demonstrates strong problem-solving ability, ownership, and a willingness to learn and build real-world data-driven applications.

EDUCATION

Bachelor of Technology , DCE, Gurugram <i>Computer Science and Engineering (Artificial Intelligence & Machine Learning)</i>	2023 – 2027 CGPA: 7.9/10
Senior Secondary (XII), Science , CBSE Kendriya Vidyalaya No.1, Delhi	2023 87.4%
Secondary School (X) , CBSE Kendriya Vidyalaya No.1, Delhi	2021 81.6%

SKILLS

Programming Languages -	Python, SQL, C++, Java
Tools & Databases -	Git, GitHub, MySQL
Libraries -	Pandas, NumPy, Matplotlib, Flask, Scikit-learn
Machine Learning -	Regression, Classification, Data Preprocessing, Feature Engineering, EDA
Core Concepts -	Data Structures, DBMS, OOPs, REST APIs, Probability, Statistics

EXPERIENCE

Data Analyst Intern, Team Computers Pvt. Ltd.	June - July 2025
– Worked on data analysis and reporting using Python, Pandas, NumPy, Matplotlib, and SQL queries. – Cleaned, analyzed, and visualized large datasets (100K+ records) using Python and SQL. – Collaborated with the analytics team to create dashboards and reports for decision-making.	

PROJECTS

Personal Finance & Goal-Based Savings Tracker API	Demo Link
– Developed 10+ RESTful APIs using Flask and SQLAlchemy to manage goals, transactions, and financial records. – Designed modular backend architecture with CRUD operations and dynamic filtering. – Implemented analytics endpoints for summary, category-wise breakdown, and balance computation. – Tested APIs using Postman with 20+ test cases, including edge cases and validation scenarios.	
AutoEasy - Car Rental Management System	Demo Link
– Full-stack web app for managing vehicle inventory, customer data, and booking, increasing data processing speed by 40%. – Designed MySQL-based CRUD operations to ensure reliable data storage, accuracy, and scalability. – Integrated Matplotlib analytics to analyze customer behavior and demand patterns, improving decision efficiency by 30%. – Focused on data integrity, scalability, and responsive UI for smooth user experience.	
Career Intelligence System — ML Career Prediction Tool	Demo Link
– Developed an ML-based career decision system to predict hiring probability, role alignment, job switch necessity, and salary growth using real job market data. – Built & trained a ML model using TF-IDF, feature engineering, and scikit-learn pipelines on 10k+ real job market records. – Integrated model confidence scores with rule-based salary benchmarks, enabling explainable recommendations with experience-wise accuracy improvements of 30%.
